

Poop is not a waste, it's a source of energy & heat

Stand-alone electricity production
off the grid.

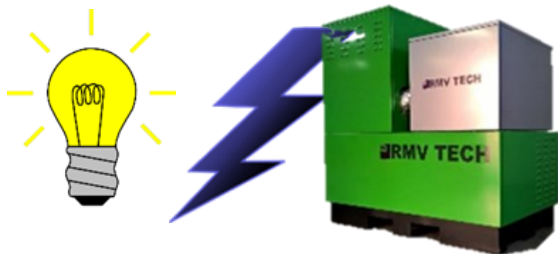

Modular design enables easy and
inexpensive scaling up

Each module produces 30kw elect-
ricity & 60kw heat.

Module size: 2,5 containers.

Low investment. €350k vs €3m

Modules high in local content

Electrifying Biowaste

Stable electricity source
for your solar network

Revolutionary bio-waste to electricity system

Revolutionary gas turbine produces electricity from biowaste

Different combinations of bio-waste can be used

Modular system means scale-up according to needs

Storable renewable energy

Clean the environment and produce 30kw electricity locally off the electricity grid

Modules can be installed anywhere and quickly

Wireless operation possible

Minimum inputs from 200 cattle, 800 pigs or 3000 humans

Local process. No energy wasted in transport of waste materials

Take the waste out of biowaste.

Waste product is environmentally friendly compost high in nitrogen.

Nutrient-rich compost for plants

Fermentation process is at such a high level that waste product is safe for humans
